About the company

Economic Society Depginli Adim (ESDA) brings specialized oilfield services, industrial maintenance, equipment supply and personnel support together for projects in Turkmenistan.

Our Mission

To deliver world-class oilfield solutions that empower our clients to achieve maximum performance while maintaining the highest safety standards and protecting the environment.

Our Vision

To be the most trusted and preferred local service provider in Central Asia, recognized for our commitment to quality, local talent development, and operational integrity.

People & values

At ESDA, we believe our greatest asset is our people. Our team consists of seasoned industry professionals and highly skilled local specialists. We invest heavily in training and development to ensure our workforce stays at the forefront of technical expertise and safety knowledge.

Excellence

Global standards applied at the local level.

Integrity

Transparency and ethics in every operation.

Innovation

Digital monitoring and advanced tooling.

Safety

Zero harm to people and the environment.

Eight areas of expertise

Comprehensive oilfield solutions - from well intervention and industrial maintenance to specialized supply chains. World-class expertise, delivered locally.

01 Downhole Interventions (Slickline)

Precision well intervention and production optimization

02 Non-Destructive Testing (NDT)

Comprehensive asset integrity diagnostics and testing

03 Expatriate Personnel Provision

Sourcing and mobilization of industry experts

04 Industrial Tank Cleaning

Automated industrial tank cleaning

05 Oilfield Equipment Supply

Reliable oilfield equipment sourcing

06 Valve & Pump Maintenance

Maintenance of critical valves and pumps

07 Rig Maintenance & Service

Technical support for drilling operations

08 Specialty Chemicals

Innovative chemical fluid solutions

01 / CAPABILITIES

Downhole Interventions (Slickline)

ESDA is a recognized leader in Slickline services across Turkmenistan. We ensure production continuity and reservoir optimization through advanced mechanical intervention systems and world-class engineering expertise.

Scope of services

- Comprehensive wellbore cleaning of wax and scale deposits
- Installation and technical service of plunger lift systems
- Precision setting and retrieval of downhole barriers
- High-accuracy pressure and temperature surveys (P/T)
- Complex fishing operations for any degree of deformation
- Technical support for wireline logging (WL) operations
- Well integrity management and zonal isolation
- Replacement and calibration of gas lift valves
- Tubing perforation and wireline packer setting

DOWNHOLE INTERVENTIONS (SLICKLINE)

Technical capability

Production Optimization

Mechanical tubing cleaning and flow optimization system installation to increase production without well shutdown.

Barrier Integrity

Installation of API-certified plugs and subsurface safety valves to ensure reliable reservoir isolation.

Geophysical Surveys

Reservoir energy data collection using high-precision electronic memory gauges.

Emergency Fishing

Rapid expert team mobilization and specialized fishing toolkits to restore wellbore access.

Technological Toolkit

Hydraulic Jars

High-impact force generation for releasing stuck downhole tools.

Pulling Tools

Industry-standard GS/JDC retrieval systems for well barriers.

Electronic Gauges

High-frequency logging of reservoir pressure and temperature.

Scrapers & Bailers

Mechanical debris removal and tubular cleaning systems.

Safety Valves

Ensuring wellbore integrity and containment in critical modes.

Wireline Cutters

Emergency disconnection during critical tool string hang-ups.

02 / CAPABILITIES

Non-Destructive Testing (NDT)

ESDA provides comprehensive non-destructive testing solutions, ensuring the structural integrity and safety of your assets. We go beyond classic NDT by conducting deep technical diagnostics and analytics.

UT | Ultrasonic Testing

RT | Radiographic Testing

MPI | Magnetic Particle Inspection

PT | Penetrant Testing

ET | Eddy Current Testing

NON-DESTRUCTIVE TESTING (NDT)

Technical capability

Ultrasonic Testing

Uses ultrasonic waves that reflect from internal material defects. Reflected waves are converted into electrical signals for precise defect characterization.

Radiographic Testing

X-rays penetrate the material and create an image on a film or detector. Allows for the most accurate identification of the presence and architecture of internal defects.

Magnetic Particle Inspection

Magnetic powder is applied to a magnetized part, accumulating at field leakage points. Surface cracks become bright and visually distinct.

Penetrant Testing

A special penetrating liquid fills fine cracks. After applying a developer, defects become clearly visible due to color contrast.

Eddy Current Testing

Method based on measuring eddy currents in the material. Any micro-defects change the current distribution, which is immediately recorded by our instruments.

We provide consulting assistance on NDT issues and help with the preparation of technical and reporting documentation at all stages.

03 / CAPABILITIES

Expatriate Personnel Provision

We offer recruitment and mobilization services for highly qualified international and local specialists for oil and gas projects of any complexity.

Scope of services

- Senior expat personnel recruitment
- Local technical specialist provision
- Full visa and logistics support
- Rotation and crew change management
- Qualification and certification control
- Administrative support and HR

EXPATRIATE PERSONNEL PROVISION

Technical capability

ESDA provides access to a pool of qualified technical specialists worldwide. We handle all complexities associated with hiring, mobilization, and personnel administration.

Local Talent

Skilled Turkmen specialists with international certifications (IWCF, IRATA).

Logistics Support

Transport support, accommodation, and catering for remote sites.

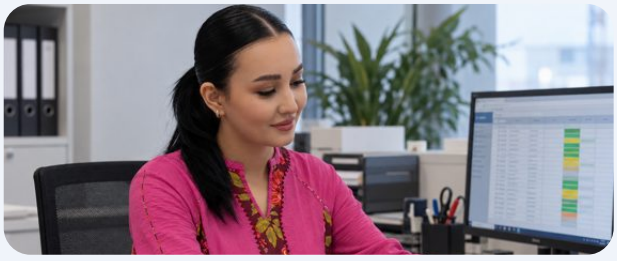

International Engineers

Drilling supervisors, mechanical engineers, and project leads with global experience.

Technical Staff

Operators, technicians, and support personnel for onshore and offshore work.

Visa Support

Full processing of work visas and employment permits in Turkmenistan.

Staff Management

Outsourcing of payroll, taxes, and personnel insurance.

04 / CAPABILITIES

Industrial Tank Cleaning

Professional tank cleaning services for crude, fuel, and chemical storage. We ensure tanks are cleaned to inspection standards while strictly adhering to HSE protocols.

Scope of services

- Crude oil and chemical tank cleaning
- Automated and manual cleaning methods
- Sludge removal and disposal management
- Confined space entry with safety support
- Thermal and acoustic insulation services
- Vessel integrity inspection preparation

INDUSTRIAL TANK CLEANING

Technical capability

We specialize in cleaning tanks of all sizes, including hazardous sludge removal and surface preparation for NDT inspection. Our methods minimize manual entry in high-risk zones.

Insulation Services

Application of thermal and acoustic insulation for pressure vessels and storage tanks.

Waste Management

Collection, transportation, and environmentally safe disposal of oil sludge.

Crude Oil Tanks

Bottom sludge removal and preparation for integrity inspections.

Chemical Storage

Neutralization and cleaning of tanks for aggressive media.

Insulation

Restoration of thermal layers to maintain product temperature.

Inspection Prep

Internal surface cleaning to support comprehensive NDT surveys.

05 / CAPABILITIES

Oilfield Equipment Supply

Procurement and logistics for high-quality oilfield equipment. We bridge the gap between global manufacturers and local project requirements.

Scope of services

- Wellhead and Christmas tree equipment
- Piping and flowline materials
- Rig spares and consumables
- Electrical and instrumentation supply
- Heavy machinery and tool sourcing
- Custom manufacturing and fabrication support

OILFIELD EQUIPMENT SUPPLY

Technical capability

Our procurement specialists leverage a vast international network of OEM partners to ensure the shortest lead times and most competitive pricing for critical oilfield assets.

Worldwide Sourcing

Direct access to US, EU, and Asian markets.

Inventory Control

Predictive stocking for critical spare parts.

Drilling Systems

High-spec components for drilling operations, including bits, drill pipes, and handling tools.

Wellhead Equipment

Production tools, completion accessories, and artificial lift components for optimal flow.

Flow Control

Industrial valves, high-pressure fittings, and premium tubulars for harsh environments.

Instrumentation

Control systems, sensors, and electrical components for automation and monitoring.

06 / CAPABILITIES

Valve & Pump Maintenance

Total maintenance solutions for critical infrastructure. We provide overhaul, testing, and field services for all types of industrial valves and high-pressure pumps.

Scope of services

- Workshop and In-situ valve refurbishment
- Pressure Relief Valve (PRV) testing
- High-pressure pump maintenance and repair
- Actuator service and calibration
- Mobile testing units for field operations
- Spare parts management and replacement

VALVE & PUMP MAINTENANCE

Technical capability

Our specialized workshop is equipped with high-capacity torque machines, lapping stations, and automated pressure testing rigs. We ensure every valve meets OEM and API standards before returning to service.

PRV Calibration

Mobile and workshop-based Pressure Relief Valve testing using certified digital rigs.

Rotary Overhaul

Full teardown, inspection, and rebuild for centrifugal and positive displacement pumps.

Pipeline Valves

Service for ball, gate, and plug valves used in critical transmission lines.

Relief Valves

Accurate pop-testing and recalibration of safety and relief valves.

Centrifugal Pumps

Laser alignment, dynamic balancing, and mechanical seal replacement.

In-situ Machining

Flange facing and mobile valve repairs to minimize process downtime.

07 / CAPABILITIES

Rig Maintenance & Service

Comprehensive maintenance for onshore drilling rigs. We support mechanical, electrical, and hydraulic systems to minimize downtime and ensure operational safety.

Scope of services

- Top Drive mechanical and electronic service
- Drawworks and mud pump maintenance
- Rig-up and rig-down technical support
- Preventative maintenance scheduling
- Emergency repair services in the field
- Component sourcing and installation

RIG MAINTENANCE & SERVICE

Technical capability

We don't just fix equipment; we manage its entire lifecycle through predictive maintenance and proactive component replacement in the field, minimizing financial losses due to downtime.

Top Drive Systems (TDS)

Expert maintenance for hydraulic and electric TDS systems. Washpipe replacement and electronic troubleshooting.

Drawworks & Mud Pumps

Mechanical overhaul for hoisting and circulation systems. Brake system tuning and fluid end maintenance.

Predictive Analysis

Condition monitoring and vibration analysis to identify hidden defects before they develop into critical failures.

Planned Maintenance

Scheduled technical interventions between wells to prevent unexpected equipment breakdowns on-site.

Major Overhaul

Restoring critical rig components to OEM standards by our fully equipped mobile task forces.

Performance Review

Detailed post-service analysis, equipment reliability reporting, and scheduling of the next maintenance cycle.

08 / CAPABILITIES

Specialty Chemicals

Reliable supply and management of essential chemicals for drilling and production operations in both onshore and offshore environments.

Scope of services

- Drilling mud additives and specialty fluids
- Production chemicals (inhibitors, demulsifiers)
- Industrial solvents and cleaning agents
- TEG / MEG supply for gas dehydration
- Chemical warehousing and logistics
- Custom blending and technical support

SPECIALTY CHEMICALS

Technical capability

Our technical team works closely with field operators to develop custom-blended solutions that address specific reservoir challenges and operational requirements.

Field Testing

On-site analysis and performance optimization.

Quality Control

Rigorous batch testing for every delivery.

Inhibitors & Solvents

Corrosion, scale, and paraffin inhibitors designed for extreme downhole conditions.

Mud Additives

High-performance drilling fluid additives for improved hole stability and lubrication.

Dehydrators (TEG/MEG)

Reliable supply of glycols for natural gas dehydration and processing facilities.

Industrial Cleaners

Heavy-duty degreasers and tank cleaning chemicals for equipment maintenance.

NDT / 01

Inspection equipment

FD560 Flaw Detector

High-precision ultrasonic detection of internal flaws.

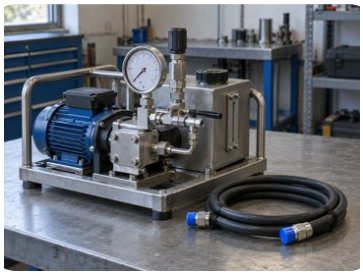

Magnetic Detectors

Detection of surface cracks in ferromagnetic parts.

X-Ray Units

Maximum accuracy in visualizing internal defect architecture.

Hydro Units (1200 bar)

Ultra-high pressure for strength and leakage testing.

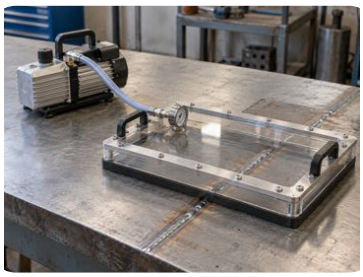

Hardness & Thickness Gauges

Precision control of mechanical properties and wear.

NDT / 02

Inspection equipment

Vacuum Control

Weld seam leak testing for storage tanks.

Borescopes / Thermometers

Inspection of hard-to-reach cavities and temperature control.

Dynamometers

Accurate load measurements for lifting system testing.

Spark Testers

Coating integrity and holiday detection.

Spectrometer

Instant chemical analysis of metals and alloys.

Assets we inspect

Pressure Vessels and Tanks

Storage Tanks and Silos

Pipelines and Gathering Systems

Structural Steel and Lifting Gear

Wellhead and BOP Equipment

Cranes and Lifting Mechanisms

Workover Rigs

Boilers and Heat Exchangers

Containers and Special Tanks

We provide consulting assistance on NDT issues and help with the preparation of technical and reporting documentation at all stages.

Project experience

Petronas Carigali (Turkmenistan)

Slickline Services

Long-term contract for Slickline units, downhole tools, and technical personnel for offshore operations in the Caspian Sea.

Petronas Carigali (PCTSB)

Valve Maintenance

Comprehensive valve maintenance including site inspections, workshop overhauls, and certification of 200+ valves.

Dragon Oil (Turkmenistan)

Tank & Vessel T&I

Turnaround and Inspection services for stationary storage tanks and pressure vessels, including NDT and insulation renewal.

NDT

Inspection experience

Baker Hughes

Hydrotesting of wellhead equipment

TKNPZ

VT, UT, PT and vacuum testing of 3000m³ tank

Petronas

Magnetic particle inspection of steel structures

ENI

Lifting gear and crane testing

Dimension

Equipment diagnostics and testing

HSE

Safety in every operation

Safety is part of how work is planned and delivered: assessing risks, preparing personnel and equipment, monitoring conditions and managing environmental responsibilities throughout the operation.

Risk assessment and work planning

Personnel training and equipment preparation

Site conditions and environmental monitoring

Waste management and reporting

Quality & traceability

Technical requirements guide the selection of methods, equipment and documentation. Inspection records, test reports and delivery documents support traceability and informed decisions throughout the asset lifecycle.

MTR Management

All supplied equipment is fully traceable with Material Test Reports (MTR), Certificates of Conformity (COC), and rigorous QA/QC documentation.

Rigorous Testing Protocols

Every asset overhauled in our facility undergoes strict hydro-testing and pneumatic seat-leak tests with computerized data logging for full traceability.

Safety & Environment

All our chemicals are supplied with comprehensive MSDS documentation and comply with international environmental standards for safe handling and disposal.

Working together

Establish manufacturing, promote oilfield equipment and technology, and expand operations with a trusted local partner.

1. Market Sizing & Feasibility

Analyze regulatory requirements, product demand, and specific tax regimes like the Law on Hydrocarbon Resources for oil & gas projects.

2. Selecting a Local Partner

We explain the specifics of doing business in Turkmenistan. ESDA helps adapt all your operational workflows to local market realities.

3. Permits & Licensing

Obtaining permits from state authorities, navigating complex tax and customs legislation, securing licenses, and state product certification.

4. Visas & Operations Adaptation

Securing entry visas for foreign citizens, mobilizing local workforce, and comprehensive adaptation of your business in Turkmenistan.

Promoting Products in the Oil & Gas Sector

ESDA offers comprehensive representation. We assist with product registration, technical certifications (state standards), participation in state procurement, and local technical support.

01 Define the scope

02 Review technical requirements

03 Prepare a proposal

04 Agree resources and schedule

Growing local expertise

Professional Growth

We invest in your future by providing continuous training programs and clear pathways for internal promotion.

Safety as Priority

We foster a culture where every team member is empowered and required to prioritize safety above all else.

Local Expertise

We are proud to develop local Turkmen talent, equipping them with world-class expertise and global standards.

We are always looking for exceptional talent. Submit your credentials to our human resources department to join our growing team of industry specialists.
